EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Lee Stepina on 9/3/08

The application has been amended as follows:

Replace all previous versions of claims 1, 6, 21, 24, 25, and 28 with the following:

Claim 1 (Currently Amended): A plasma processing method having a first and a second plasma processing step carried out in a single chamber, wherein deposits are substantially accumulated in the chamber during the first plasma processing step, the method comprising the steps of:

dry cleaning an inside of the chamber by using a dummy substrate between the first and the second plasma processing steps,

wherein the dry cleaning step is performed by supplying into the chamber a deposit removing gas for removing the deposits produced in the chamber during the first plasma processing step and supplying a dummy substrate etching gas that etches the dummy substrate and stabilizes an etching rate of the second plasma processing step, which is carried out right after the dry cleaning step,

wherein the second plasma processing step includes a plasma etching performed without producing deposits in the chamber, and

wherein a first CF-based gas is supplied in the first plasma processing step, and a second CF-based gas comprising CF_4 , O_2 , and Ar is supplied in the second plasma processing step, and the first CF-based gas has a different composition from the second CF-based gas such that a fluorine/carbon (F/C) ratio of the first CF-based gas is smaller than that of the second CF-based gas.

Claim 6 (Currently Amended): A plasma processing method comprising the sequential steps of:

performing a first plasma etching step in a chamber, during which deposits are produced and accumulated in the chamber;

dry cleaning an inside of the chamber by using a dummy substrate; and
performing a second plasma etching step without producing deposits in the chamber,
wherein the dry cleaning step is performed by supplying into the chamber a deposit removing gas for removing the deposits and a dummy substrate etching gas that etches the dummy substrate and stabilizes an etching rate of the second plasma etching step carried out right after the dry cleaning step,

wherein a ratio of a flow rate of the dummy substrate etching gas to that of the deposit removing gas is not less than about 0.14% but not larger than about 7.1%, and

wherein a first CF-based gas is used in the first plasma etching step, and a second CF-based gas comprising CF_4 , O_2 , and Ar is used in the second plasma etching step, and the first CF-based gas has a different composition from the second CF-based gas such that a fluorine/carbon (F/C) ratio of the first CF-based gas is smaller than that of the second CF-based gas.

Claim 21 (Currently Amended): The plasma processing method of Claim 1,

wherein the supplying the first CF-based gas includes supplying C_4F_8 ,

wherein the supplying the deposit removing gas and supplying the dummy substrate etching gas in the dry cleaning step includes supplying O_2 and CF_4 , respectively.

Claim 24 (Currently Amended): The plasma processing method of Claim 1,

wherein the first and the second plasma processing steps and the dry cleaning step are carried out without a seasoning step occurring between the dry cleaning and the second plasma processing step.

Claim 25 (Currently Amended): The plasma processing method of Claim 6,

wherein the supplying the first CF-based gas includes supplying C_4F_8 ,

wherein the supplying the deposit removing gas and supplying the dummy substrate etching gas in the dry cleaning step includes supplying O_2 and CF_4 , respectively.

Claim 28 (Currently Amended): The plasma processing method of Claim 6,

wherein the first and the second plasma etching steps and the dry cleaning step are carried out without a seasoning step occurring between the dry cleaning and the second plasma processing step.

Claim 26: lines 2 and 6 , delete "processing" and insert —etching—

2. The following is an examiner's statement of reasons for allowance: The prior art fails to teach a first etching step, followed by a drying cleaning step, followed by a second etching step using a CF based gas comprising CF_4 , O_2 , and Argon, wherein the first CF based gas used in the first etching step has a different composition than the second-CF based gas used in the second etching step, such that a fluorine/carbon ratio of the first CF-based gas is smaller than that of the second CF based gas. The closest prior art is that of Van Autryve et al. and Chen et al. Van Autryve et al. teach a first etch step using a halogenated gas in combination with a passivating gas, such as CHF_3 . Van Autryve et al. teach a dry cleaning step and a second etching step using the passivating gas CHF_3 gas. Chen teaches the same etching gas for both the first and second etches, with a dry-cleaning step in between. In Summary, neither reference teaches a first CF based gas used in the first etching step, which as a different composition than the second CF-based gas, wherein the second CF based gas

comprises CF₄, oxygen, argon, and wherein a fluorine/carbon ratio of the first CF based gas is smaller than that of the second CF based gas. The additional changes to the amendments were made to correct minor 112, second paragraph issues in order to place the application in better condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
